

Possible N O N – E M E R G E N C Y Reconstitution of Hyaluronidase

1. Draw up 10ml of normal saline in a 10 ml syringe
2. Inject 1 ml of this solution into the vial containing the powdered hyaluronidase
3. Rotate the vial to ensure powder is fully dissolved
4. Draw the 1 ml of reconstituted hyaluronidase back into the 10ml syringe
5. Mix the hyaluronidase throughout the entire 10 ml by repeatedly inverting the 10ml syringe
6. 1ml or 0.5 ml insulin syringes can be used to draw from the 10ml syringe
7. For correction of aesthetic indications:
Superficial - inject slowly in or just under the deposit of filler using a 30g needle

E M E R G E N C Y Reconstitution

Emergency situations of vascular compromise require a more concentrated solution.

1. Dissolve 1500 iu of hyaluronidase with 2.5ml of normal saline
2. Inject a minimum of three to four injections of 0.1ml into both the dermal filler and surrounding areas
